

# High Density Patch Panel

## Introduction

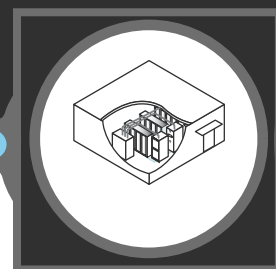

The 4U High Density Chassis has 12 slots and provides a very high density solution. It is ideal in situations where floor and rack space utilization is critical and Moves Adds and Changes (MACS) are limited. Although it is a high density solution, the 4U chassis is designed with finger access in mind, striking the optimum balance between space utilization and access. This chassis enables a maximum of 12 cassettes or adapter plates to be installed, offering up to 144 SC or 288 LC connections in 4U. In order to improve the physical security, a lockable metal cover has been provided. This cover also includes a 1U protected cable management duct.

## Features:

### ➤ High Density Patch Panel

- 4U Chassis design
- 19" compliant
- Rear cable manager with clips for cable storage
- Provides easy maintenance of individual fiber pigtails
- Splice Modules available in SC, LC and FC/ST
- Upto 12 fibers in a single splice module

# High Density Patch Panel

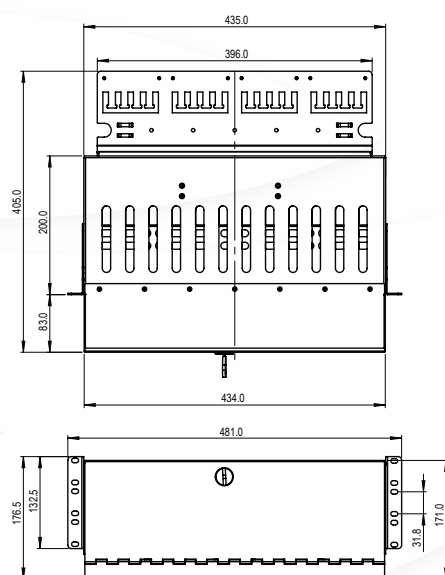

## Applications:

- FTTx
- Data Communications Networks
- Data Centers
- Central Office

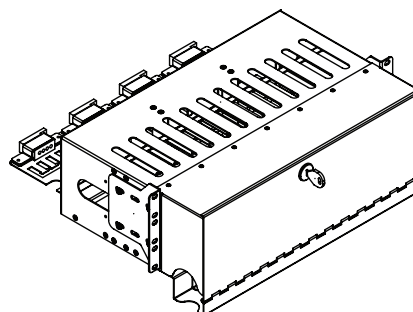

## Specifications:

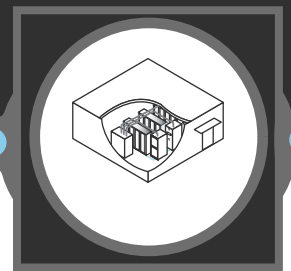

|                      |                                                       |
|----------------------|-------------------------------------------------------|
| Connector Type       | SC, SC/APC, FC/ST, LC (SC Simplex Foot Print), LC/APC |
| Adaptor Count        | Max. 12 per splice module                             |
| Enclosure Dimensions | 434(W) x 176.5 (H) x 405(D)                           |
| Chassis Construction | Outer Body 1.6mm<br>Others 1.0 1,2 & 1.5mm            |
| Powder Coated Paint  | Black/Gray                                            |
